

EARTHMOVING CONTRACTORS

Ovenden Earthmoving has become the leading earthmoving contractor in the area, having grown at a sustainable pace over the years.

The Company was originally established in 1973 to carry out the Earthworks for Cross Channel Contractors in connection with the construction of the Channel Tunnel.

Since then the company has grown steadily, acquiring a wealth of experience in the many and varied earthworks contracts that have been undertaken.

Ovenden Earthmoving firmly believes that the customer is always right, well nearly always. We aim to form a firm partnering relationship with our customers, which we continue to maintain.

As a result of this much of our work is repeat business with clients who enjoy

working with someone they can trust and rely upon.

From tender to completion we like to work with our clients rather than for them, by ensuring this we maintain our continued growth and good name within the industry.

We have a good team work ethic in the company and work hard to become part of the customer's team. By following these team work attitudes we believe we can enjoy working together.

All aspects of earthmoving have been undertaken by the company, from major road schemes, including most of the dualling of the A299 Thanet Way and the widening of the M2/A2 from Gillingham to Rochester, to various local bypasses.

Golf course construction, reservoirs, embankments, remediation works, landscaping, landfill cells and every other aspect of earthworks have been carried out for most of the major national contractors.

We are able to draw from a large pool of our own directly employed personnel, all CSCS trained and with a wealth of skill and experience, along with a vast array of plant and equipment, to ensure that we can successfully complete any earthworks project on time and on budget.

Ovenden Earthmoving actively promotes partnering with its clients. We are convinced that both the quality and efficiency of our projects are improved by partnering. This results in an increased amount of repeat business and preferred tendering bids.

Safety and the environment are both of paramount importance in our business. We ensure the health safety and welfare of our workforce, our clients and the environment, through our health, safety and environmental policy, risk assessments, tool box talks, staff awareness and training.

Recycling and land restoration are significant parts of our business. We have our own landfill sites for inert wastes and in conjunction with these, recycling centres for processing demolition materials and soils into recycled aggregates and soils.

As this part of our business has grown our investment in recycling plant has increased and we now offer a complete crushing and screening service to our customers.

Our crusher fleet consists of Tracked Mobile Primary Jaw Crushers, Tracked Mobile Secondary Cone Crushers, Tracked Mobile Vertical Shaft Impact Crushers and a Combined Shredder Crusher and Screener.

The screening fleet consists of all tracked mobiles of various sizes fitted with magnets and dust suppression.

Loading shovels are all fitted with on board weighloaders and printers.

Excavators are all equipped to operate with pulverisers, hydraulic breakers and magnets and the Dig a Crusher (a jaw crusher mounted inside an excavator bucket).

We contract crush & screen for the Major Contractors in recycling e.g. Tarmac, Lafarge, Viridor and others producing sub base and single size aggregates from rail ballast, concrete, asphalt, bricks & blocks. High quality crushed glass for asphalt and fiberglass production.

## coastal defences

The first contract awarded was a beach nourishment contract in 1997 at Sandwich Bay in Kent. Since this time we have continued to carry out similar contracts in many other parts of the UK and Europe.

Various rock structures have been constructed, including revetments, groynes, reefs and hybrid rock/precast concrete reefs ranging from 3,000 to 80,000 tonnes.

Many beach renourishment schemes have been completed involving hundreds of thousands of cubic metres of fill.

We have invested heavily in specialist plant for these works, low ground pressure bulldozers, dumptrucks, wheel loaders, excavators and grapples. All of which run on biodegradable oils to safeguard the fragile environment in which we often work.

The entire fleet consists of up to date plant, which along with strict maintenance schedules, our own fitters on 24 hour callout, extensive workshop facilities and parts stock, ensure that the machines are available 24 hours a day 7 days a week, as is often required on projects of this nature.
